TAGS® Specialists

Dedicated centers of excellence for back and knee conditions.

At **TAGS**, our philosophy is simple:

We always consider non surgical solutions first.

At **TAGS**, surgery is always the last option for our patients.

Natural recovery and your safety... is our top priority.

Regenerate Your Spine... Without Surgery

Our program combines the ultimate in non-surgical expertise, researched technologies and innovation to optimize a natural recovery from spine curvature (scoliosis). It's effective, affordable and best of all risk free!

What is scoliosis?

Scoliosis is the most common spinal deformity in children. It is a sideways (lateral) curvature of the spine, in which the spinal column curves and twists, causing problems which can also affect the ribs and pelvis and when severe, even the internal organs.

For the majority of children this is very mild, but even mild curves need to be monitored, as they can and often do progress. Scoliosis is best treated whilst children are young, as the body responds better to treatment when the spine is still flexible and growing. Timing is of absolute importance. The earlier you start the treatment, the greater the possibility of changing the curve.

Whilst scoliosis is most common in children, these curves can often progress into adulthood resulting in pain and poor posture.

Signs of scoliosis?

Uneven shoulders, uneven hips and pelvis, unequal leg lengths. One side of the back may be more prominent than the other causing clothes to not hang properly.

Very mild

Mild

Moderate

Severe

Our system includes:

Scoliosis Bracing

SCOLIOSIS BRACING:

Spinal braces apply forces which push or pull on the body and have a positive affect on the spine. It offers significantly better long term post treatment results, postural improvement and more stability after brace removal.

Chiropractic

CHIROPRACTIC:

Chiropractors correct the alignment of the spine through gentle and specific joint manipulations called adjustments to improve spinal flexibility and reduce pain.

Personalized Rehabilitation

PERSONALIZED REHABILITATION:

Specific exercises to strengthen the weak muscles supporting the spine, helping to increase flexibility and balance and improve overall spine function and posture.

Whole Body Vibration Therapy

WHOLE BODY VIBRATION THERAPY:

The benefits of whole body vibration include neural adaptation, improving proprioception and coordination, as well as strength and endurance, with less risk of injury than regular exercise, in a shorter time.

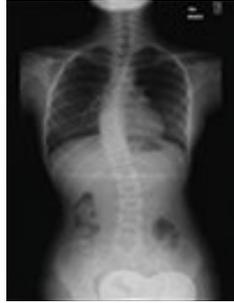

Deformity
from Scoliosis

Normal Spine

before

after

Our System

ADOLESCENTS:

- Vital to prevent/delay progression, as the risk of progression is high.
- Attain postural improvement
- Better balance
- Delay risk for surgery

ADULTS:

- Manage pain
- Improve posture
- Prevent/delay further progression and degeneration.

Why is Our System so Effective?

Our Scoliosis Recovery System:

1. Strengthens and rebalances weak muscles specific to the type of curve.
2. Corrects alignment and maintains spinal flexibility
3. Improves posture both in and out of brace

Our scoliosis braces offer almost total freedom of movement and allows you to continue participating in sports and normal day to day activities.
